

About Sylvan Green Earth

Sylvan Green Earth Consulting is run by Dr. Sylvan Kaufman. Dr. Kaufman has done ecological research and land management for more than 15 years. She works with professionals in landscape design, landscape contracting and horticulture to address a wide range of landscaping needs for homeowners, businesses and institutions.

In addition to consulting, Dr. Kaufman also specializes in writing engaging articles on science and gardening topics, grant writing and educational signage. She is co-author of the field guide, *Invasive Plants*, published by Stackpole Books.

Dr. Kaufman is a popular and frequent lecturer at professional meetings, garden clubs, nature centers and botanical gardens. She also teaches Ecology and Ecological Restoration for George Washington University's Landscape Design Program.

Consulting Services for Homeowners

Sylvan Green Earth Consulting brings extensive experience in ecology and land management to help you achieve your landscape goals. Whether you have a 1/4 acre or 1,000 acres, Sylvan Green Earth can help you decide how to enhance and manage your property effectively.

- **Ecological and Plant Surveys**
- **Land Management Plans**
- **Invasive Plant Identification and Control**
- **On-Site Training**
- **Wildlife Habitat Evaluation**

Japanese honeysuckle and English Ivy damage forest regeneration.

Not sure what you have on your property?

- **Ecological and Plant Surveys**

Discover your land through botanical and ecological surveys. A survey can provide information on what plant and animal species occur on a property, soil types, microclimates and unique communities.

Do you want to create a forest or a meadow?

- **Land Management Plans**

Document the state of forests, wetlands and meadows and plan for their future. Determine whether you need invasive plant control, plantings, erosion control, or wildlife management to achieve a healthy, sustainable ecosystem.

Do you have problems with invasive plants?

- **Invasive Plant Identification and Control**

Learn what invasive plants threaten your property and how to control them. Prioritize control efforts and plan for post-removal restoration. We will develop a management plan for you based on your resources and goals.

Not sure if you know a weed from an ornamental?

- **On-Site Training**

We can teach you how to identify the plants on your land. Learning which plants to remove and which ones to care for will make your landscaping more effective and save you time and money.

Do you want to attract birds and butterflies?

- **Wildlife Habitat Evaluation**

Wildlife habitat evaluation looks at how well your property provides food, water, shelter and nesting sites for wildlife. We will suggest ways to improve habitat through new plantings, nesting structures or shelters for the types of wildlife you want to attract.
